

# SAPHIR 25 & 40

The Saphir 25 & 40 offer the entry level to "Mill Size" baling presses. Ideal for production waste, which is fed continuously by either hand/conveyor/air.

## Technical data:

|  | 25                 | 40                 |
|--|--------------------|--------------------|
| Feed Opening (mm)                                    | 1180x650           | 1180x650           |
| Loading capacity (cu.m)                              | 0,53               | 0,53               |
| Hydraulic power (tons)                               | 25                 | 40                 |
| Electric power (KW/HP)                               | 15/20              | 22/30              |
| Specific pressure (kg/sq.cm)                         | 5,10               | 8,16               |
| Number of cycle/minute                               | 3                  | 4                  |
| Channel section (mm)                                 | 700x700            | 700x700            |
| Oil tank capacity (liters)                           | 400                | 500                |
| Total weight (ton)                                   | 4,5                | 5                  |
| Production (m <sup>3</sup> /h)                       | 157                | 177                |
| Production according to density of waste (t/h)       | 1-2,5              | 2-4                |
| Automatic binding                                    | 3 wires Ø 2,7 mm   | 3 wires Ø 2,7 mm   |
| Overall dimensions Lxwxh                             | 5805x1150x2400 mm  | 5805x1150x2400 mm  |
| Bale size (mm)                                       | 700x700x(600-1200) | 700x700x(600-1200) |
| Weight of the bales (kg)<br>Cardboard, length 1.20 m | 100-300            | 150-400            |
